Amendments to the Specification

Please replace the paragraph beginning on Page 11, line 2 with the following amended paragraph:

A valve 48, shown in Fig. 3 (~~not shown in Figs. 1-3~~), positioned within inducer 38, is moveable between an open position and a closed position. In the open position, the combustion products drawn into inducer 38 are in communication with the ambient air through a vent connected to inducer 38. Thus, the combustion products do not enter cooking chamber 10 and convection oven 5 operates as an indirect-fired combustion system.
